Automate your third-party application management

With Patch My PC you can ensure that your applications are always up to date, reducing the risk of vulnerabilities and security breaches. By automating the patch management process you no longer need to manually search for, package, and install applications and updates, saving valuable time and resources.

No Need to Package

Application packaging is a special skill, and it can be very time consuming if you need to update apps on a regular basis. At Patch My PC, we continuously scrape vendor websites to detect if there are updates available; when we find an update, we will automatically package it for you with the customization options you've selected. Our huge application catalog makes it easy for you to deploy applications and automatically keep them up to date using Microsoft ConfigMgr and Intune.

Improved Security

A staggering 57% of security breaches and ransomware incidents have begun with an unpatched vulnerability[†]. A successful attack happens every 11 seconds and costs an average of $4.4 million USD[††]. Patch My PC helps you eliminate these vulnerabilities by keeping your applications continuously up to date- all for less than the price of a cup of coffee.

Analytics & Compliance Dashboard

Updating your applications is great, being able to verify that your applications are up to date is even better. With Patch My PC's Advanced Insights you can easily track and report on the progress of updates and CVEs. Enhance your ConfigMgr data with custom inventory and additional 3rd party data for disk & battery health, monitor information, support, warranty data, and more.

Exceptional Support

Experience seamless support right from the get-go, whether you're on the free trial or have chosen our paid subscription. Our dedicated in-house support engineers located across the globe are ready to assist you at every step. Support at a glance:

- 1-hour setup session
- 45-minute Environment Review and Q&A Session
- Support options by phone, email, forum, or live chat

> **Having the automation Patch My PC allows for in your enterprise is like having 8 extra people ensuring the latest updates are packaged and available for 100s of apps in your environment.**
>
> In an ever more complex landscape, this is one less thing you need to dedicate full-time resources to handle well in your environment. Pair this with Patch My PC's amazing responsiveness and customer service, and it all makes the solution worth much more than its weight in gold. If you are sitting on making the decision to get a Patch My PC subscription for your company, you are literally losing money in resource time."
