## Built for Modern MSPs

As more service providers adopt Intune, managing app deployments and patching tenant by tenant does not scale. This platform is designed for delivering updates across multiple environments using the Patch My PC cloud portal. It simplifies application deployments and gives MSPs a faster, more consistent way to keep customers up to date

## Simplify Intune at Scale

Managing apps across tenants should not mean repeating the same steps every time. With App Sets, you define the apps once and deploy them to as many customers as needed. Just assign a customer to a set, and they receive the full list of applications automatically. Combined with centralized management, role-based access, and automated patching, this helps eliminate repetitive work and speeds up deployments.

## Built on Trusted Automation

Behind the scenes, the platform keeps applications updated and secure across every customer. Automated patching keeps systems secure, supports compliance, and cuts down on manual work. Role-based access ensures the right people can manage the right tenants, while consistent deployments help avoid drift and make support easier.

## Your Upgrade Starts Now

Already using Publisher? This is not a replacement, it is the next step. By moving to the MSP experience, you gain access to App Sets, centralized visibility, and a more efficient way to manage apps across customers. This upgrade gives you the ability to deploy apps in bulk and manage them from one place. With App Sets, centralized visibility, and cloud-native control, Patch My PC's MSP solutions let you scale without complexity. Book a demo to explore how simple modern patching can be.

**Having the automation Patch My PC allows for in your enterprise is like having 8 extra people ensuring the latest updates are packaged and available for 100s of apps in your environment.**

In an ever more complex landscape, this is one less thing you need to dedicate full-time resources to handle well in your environment. Pair this with Patch My PC's amazing responsiveness and customer service, and it all makes the solution worth much more than its weight in gold. If you are sitting on making the decision to get a Patch My PC subscription for your company, you are literally losing money in resource time."
